

Hear For You

Team: Serena Trang and Mili Dhru

Imagine being in pain and going to visit the doctor. You're trying to explain your symptoms, but you don't speak the same language as the person providing your care.

For millions of patients with limited English proficiency (LEP), this is a **daily reality.**

Miscommunication and Medical Errors

Nearly 49% of such patients experienced physical harm due to communication issues

Higher Readmission Risk

LEP patients are more likely to miss follow-up appointments or misunderstand treatment plans — increasing their risk of complications and readmissions.

Increased Healthcare Costs and Utilization

LEP patients often undergo more extensive diagnostic procedures, experience longer hospital stays, and incur higher medical expenses due to communication challenges

Challenges in healthcare

for limited English proficiency
(LEP) patients

These challenges are not theoretical — they are deeply rooted in the real-world experience of thousands of patients right here in southern Texas.

Federally Qualified Health Centers (FQHCs) serve as the backbone of care in underserved, high-LEP communities across the region.

FQHCs in Southern Texas –

- Southern Texas FQHCs serve predominantly Hispanic communities — where many patients speak little or no English.
- These clinics received federal funding but still often operate on **tight budgets** and can't afford full-time interpreters.
- LEP patients at FQHCs are at higher risk of **medical error, miscommunication, and readmission** — creating a pressing need for cost-effective, scalable translation solutions.

Distribution of FQHCs in Texas.

What are their main challenges?

Texas border region readmission -

4.17%

Heart failure

3.46%

Pneumonia

Harlingen region in Southern Texas -

22%

All-cause readmission rate

Patients with limited English proficiency (**LEP**) experience lower satisfaction with care and poorer communication, which contributes to higher readmission rates and longer hospital stays. Spanish-speaking home health patients had a 30-day readmission rate of **20.4%**, compared to **18.5%** for English speakers.

**Current language access solutions in
healthcare are fragmented.**

How Might We...

Address the status quo of how healthcare manages the problem of language barriers?

Current Landscape

Care to Translate

LanguageLine Solutions

Pocketalk Medical

ABRIDGE

Abridge AI

Opportunity Areas

- End-to-end language access (before, during, and after visit)
- Real-time translation with hands-free wearable use
- Multilingual summaries + treatment plans for patients
- Effective integration into EHRs
- HIPAA-compliant, patient-facing mobile app experience
- Scalability for underserved populations

Hear For You

A HIPAA-compliant wearable and app platform that provides **real-time culturally competent translation, AI summaries, and direct to patient care plans** — bridging language gaps and improving care for multilingual patients.

Cost Breakdown - Production

Hardware Manufacturing Costs (Per Unit @ Nat'l Scale)

Component	Description	Cost (USD)
Earpiece hardware (Bluetooth)	Mass manufacturing discounts apply	\$8-10
Embedded processor (MCU/SoC)	Real-time audio processing	\$4-6
Battery and charging components	Bulk pricing	\$2-3
Microphone & noise cancellation	Higher quality possible at scale	\$2-3
Assembly & materials	Reduced per-unit cost	\$4-6
Quality control & packaging	Larger run = better logistics	\$1.50-2

Total Hardware Cost Per Unit (at scale): ~\$21.50-30

For 100,000 units: \$2.15M-3M total hardware cost

Cost Breakdown - Production

Software Cost Breakdown (@ Nat'l Scale) – One-Time Investment

Component	Description	Cost (USD)
Scalable Mobile App Infrastructure	Optimized for performance, device diversity	\$200,000–300,000
Advanced AI/ML Architecture	Real-Multilingual NLP, real-time models	\$150,000–250,000
Enterprise-Level Backend	Multi-tenant, HIPAA-compliant, scalable backend	\$100,000–150,000
EHR Integration (Nationwide)	Multiple vendors (Epic, Cerner, eClinicalWorks, etc.)	\$100,000–200,000
Clinical Workflow Customization	FQHC-specific dashboards and configurations	\$50,000–100,000
Security & Compliance Upgrades	HITRUST, HIPAA, SOC 2 readiness	\$50,000–75,000

Total Expanded Development Cost: ~\$650,000–1.1M

Cost Breakdown - Production

Software Cost Breakdown (@ Nat'l Scale) – Nat'l Rollout, Monthly

Component	Description	Cost (USD)
Cloud Hosting & Storage	Scaled storage for audio, transcripts, patient data	\$15,000–25,000
AI/ML Model Maintenance	Multilingual model updates, language additions	\$10,000–15,000
DevOps & Engineering Support	24/7 support, monitoring, platform reliability	\$15,000–20,000
Customer Success & Training	FQHC onboarding, support staff, feedback loops	\$10,000–15,000
Compliance & Data Governance	National regulatory audits, security tooling	\$5,000–10,000

Total Monthly Recurring Cost: ~\$55,000–85,000/month

Tiered Cost Structure – Purchase

Component	Description	Tier	Cost (USD)
Setup & Onboarding	One-time integration, training, clinic customization	Small: 1–3 sites	\$7,500–10,000
		Mid-size: 4–10 sites	\$12,000–20,000
		Large system: 10+ sites	~\$25,000+ (custom)
Hardware Bundle	Includes wearable earpieces, warranty, connection to app	Single Unit	\$150–200 per unit
		10-Device Starter Bundle	\$1,500–1,800
		(Bulk discount at 100+ units)	Custom pricing
Software Bundle	Access to mobile app, real-time translation, AI summaries, analytics	Tier 1 (Small)	\$500–800 / month
		Tier 2 (Mid-size)	\$1,000–1,500 / month
		Tier 3 (Large systems)	\$2,000–3,500 / month
Add-Ons	Optional advanced offerings	Language Pack (e.g. Mixteco)	\$5,000+ one-time
		Advanced Reporting / Analytics	\$2,500 / year
		Staff Refreshers / Customization	\$500–1,000

3-Year Financial Projection

Category	Year 1	Year 2	Year 3
Revenue	\$200,000	\$800,000	\$2,400,000
Cost of Goods Sold	\$70,000	\$280,000	\$840,000
Gross Profit	\$130,000	\$520,000	\$1,560,000
Operating Expenses	\$400,000	\$600,000	\$950,000
Net Income (Loss)	-\$270,000	-\$80,000	\$610,000

Our Ask:

We're asking for \$500,000 for 10% equity to expand our offering within additional FQHCs in southern Texas and begin scaling more broadly nationwide.

Appendix

Key Partnerships

- Wearables Manufacturers
- EHR Systems
 - Epic
 - Athena
- Stockholders
- Healthcare providers (physicians, nurses)
- Healthcare systems
 - Hospitals
 - Clinics
 - EMS

Key Activities

- Partnership management with Health Systems
- User testing and iterations with key users
- Ensure regulatory compliance (HIPAA)
- Development and quality check of materials and wearables

Value Propositions

- Real-time, accurate translation of medical conversations during consults via a wearable earpiece and mobile app
- AI-generated summaries of the visit and treatment plan translated into the patient's preferred language
- Stored transcripts from previous visits for patients and providers to reference
- Reduces miscommunication, increases health literacy, and empowers patients to follow through with care
- Supports culturally competent, equitable care delivery across language barriers
- Current wearables / similar ecosystems in this space do not offer a HIPAA-compliant method of storing transcriptions, nor do they offer any robust patient-facing features.
- In addition, many current products do not effectively integrate into EHRs, making them potentially difficult to adopt and implement into existing workflows.

Customer Relationships

- B2B model: ongoing customer support and training for health systems
- B2C component: patient app with clear UI, multilingual onboarding, privacy assurances
- Automated and human-assisted onboarding support for clinics
- HIPAA-compliant follow-up channels for questions

Customer Segments

- Primary:
 - Hospitals and health systems (especially those serving multilingual or immigrant populations)
 - Individual healthcare providers (doctors, nurses, community health workers)
- Secondary:
 - Government/public health clinics (e.g., Medicaid-serving institutions)
 - Patients with limited English proficiency (LEP)
 - Telehealth platforms and urgent care providers

Key Resources

- Engineering team specializing in speech recognition / translation and Machine Learning (NLP / LLM engineers)
- Mobile and wearable design and development team to build out the digital ecosystem
- Healthcare-oriented design / research team to understand, evaluate, and configure the digital interfaces with data-backed evidence, especially in multilingual contexts
- Clinical advisors to help inform various use cases
- Manufacturing / development team to support production of the wearable devices / hardware
- FDA / Legal / regulatory counsel to ensure compliance with HIPAA
- B2B Healthcare sales team and health systems / health centers (and their EHRs) to run pilots with

Channels

- Direct sales to hospitals and clinics
- Partnerships with electronic health record (EHR) vendors or telemedicine platforms
- Medical device distributors and resellers
- App stores (for patient-facing mobile app component)
- Conferences, trade shows, and demos for healthcare professionals

Cost Structure

- Marketing and Sales
- Cloud hosting and infrastructure costs
- Manufacturing costs
- Raw Material costs
- AI Software & Development
- Customer support & training

Revenue Streams

- Training Courses for end-users
- Subscription for EHR integration
- Wearable cost per unit
