

ONTARIO PATIENT PORTAL

MyPO

Presented by

Jewel Thompson-Adiuku
DES 396

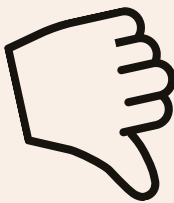

🌸 What is happening in Ontario?

Currently, patients in Ontario don't have easy digital access to their EHR or other health documents.

This problem is exacerbated by patients' lack of medical knowledge of their own treatments or tangible documentation that can be provided to their providers.

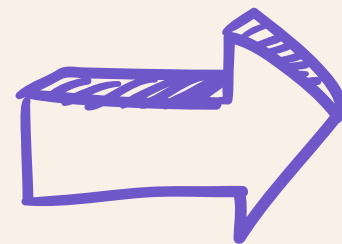

" I did request for the cardiologist to send me the imaging because I didn't have confidence in his assessment, but he didn't" 

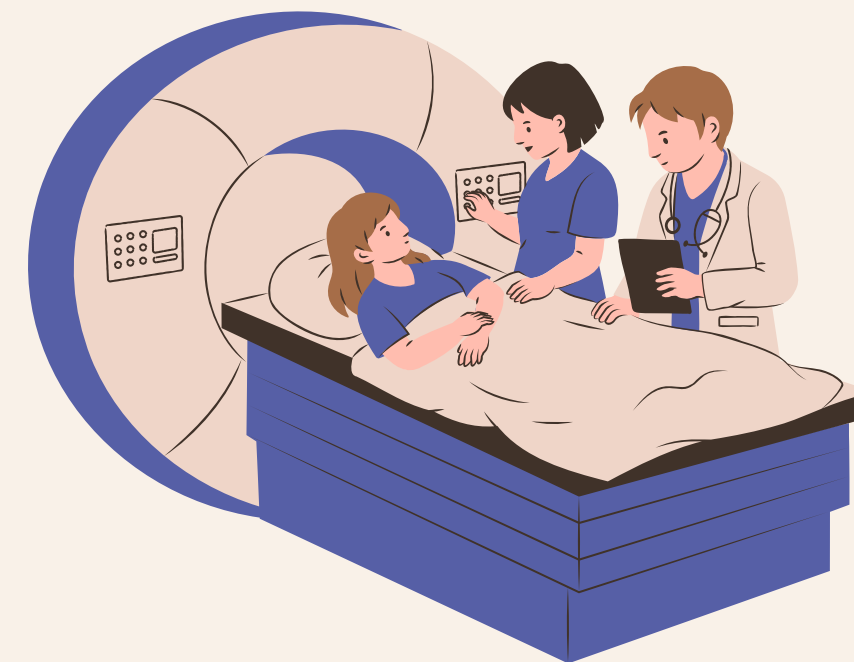

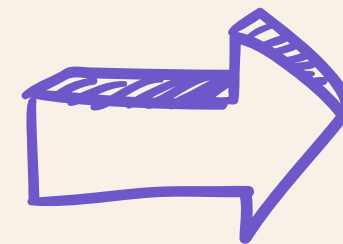

Patients have a right to see the contents of their record at any time and for any reasons, but face **significant impediments** to this right.

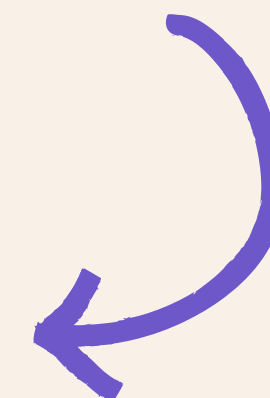

Patient consults their
Family Doctor

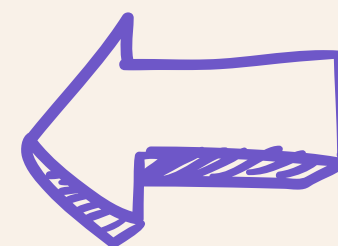

Physician refers patient for
medical imaging or labs

A form of medical imaging
or blood work is completed

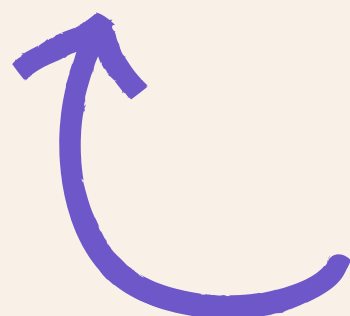

Imaging/labs are reviewed
by Radiologist & Report is
created

Report is shared with other
physicians to coordinate
care

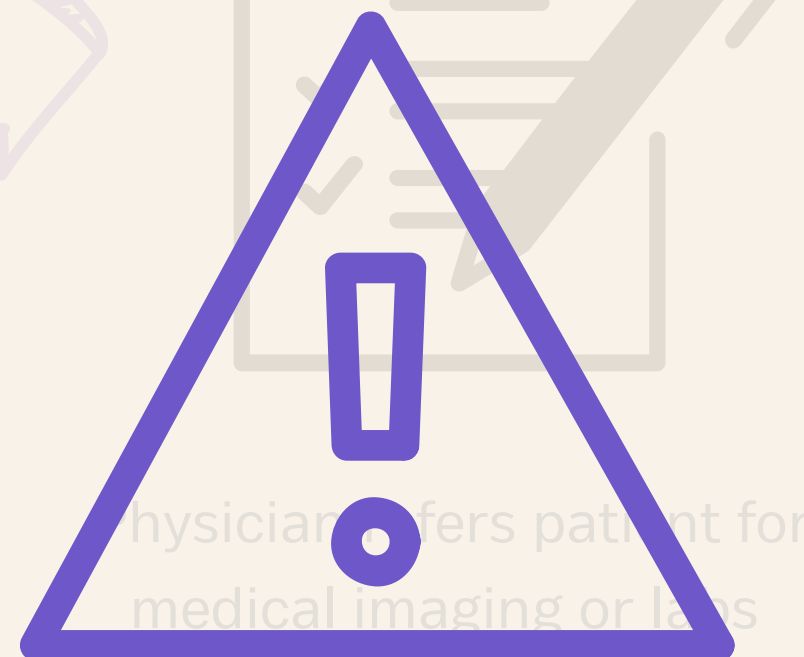

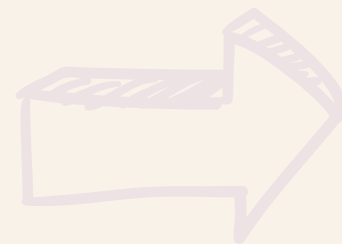

Or report is sent back to
the referring physician

Patient consults their
Family Doctor

Physician refers patient for
medical imaging or lab tests

A form of medical imaging
or blood work is completed

The patient is kept out of this
process and does not have
access to these reports

Or imaging is sent back to
the referring physician

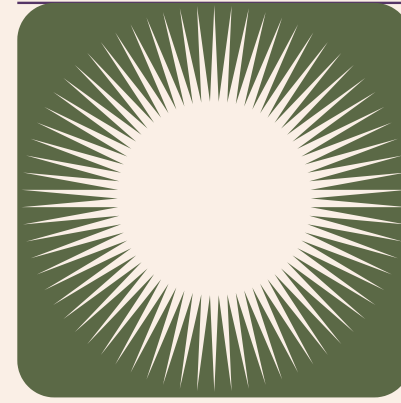

Imaging is shared with
other physicians to
coordinate care

Imaging is reviewed by
Radiologist & Report sent
over to referring Physician

MyPO

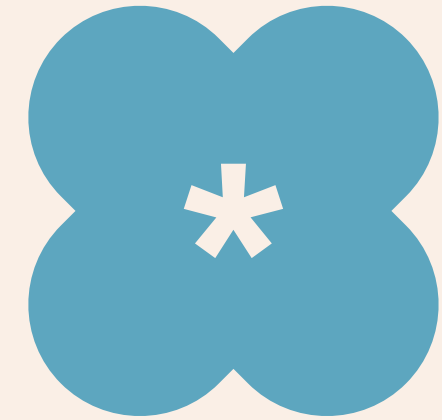

Digital platform that provides patients easy access to receive, store, and share health documents all from one location.

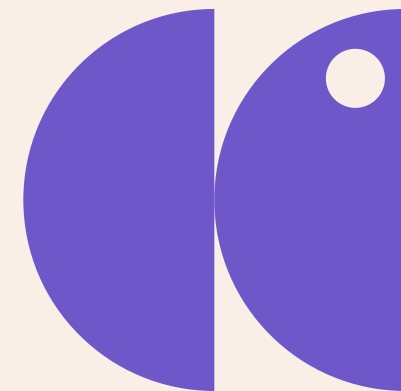

Many services supported:

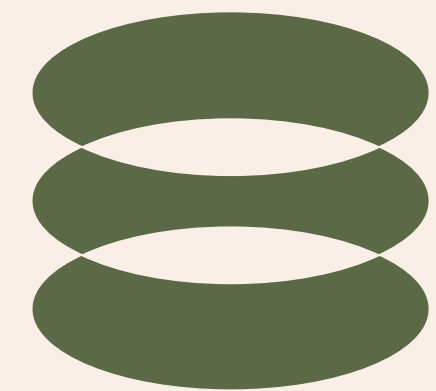

- Imaging reports
- Lab test results
- Immunization records

Easy summary provided with documents to help patients better understand the report

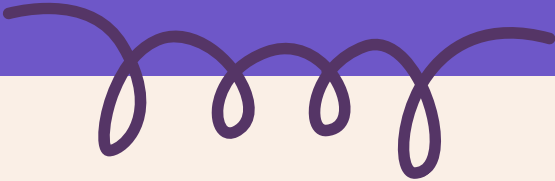

AI integration providing patients and providers with recommendations on next steps to be completed with this information

24/7 access to health documents on your secure digital platform

Our Values

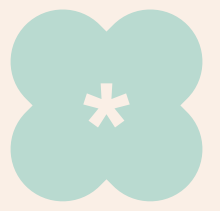

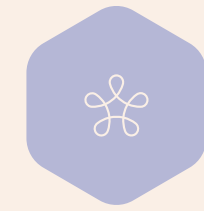

MISSION

To provide patients with the information they need to take affirmative action to manage their health.

OUR BELIEF

Making health documents as easily accessible to patients, as is to their providers, supports patient-centred care and is essential to addressing many problems that exist in the realm of medical imaging and lab results.
