ABOUT US

WE ARE SANDRA AND MARA.

Sandra is a nurse and interior designer. With many years in a hospital setting, wayfinding has always been a challenge for all.

Mara is a human-centered designer with a background in architecture. As a guide for cancer patients in the hospital she first got introduced to the issue of wayfinding.

01

THE PROBLEM
OF WAYFINDING
IN A HOSPITAL

LOST IN RADIOLOGY...

- Hospitals are busy places with heavy foot traffic every day. Now couple that with the potential anxiety that patients and visitors may feel as they think about or attempt to navigate a sprawling and ever-changing hospital.
- **How Might We** utilize technology to individualize the patient/visitor experience through the space of a hospital with ease.
- **How Might We** keep up with the ever changing built environment of hospitals so patients and visitors can navigate the space with confidence
- **How Might We** bring the GPS system to each person within the hospital setting that takes the guess work out of navigation.

THE VALUE FOR HEALTHCARE INSTITUTIONS

- Improves the human-centric experience, improves patient outcomes, increases productivity and revenues
- Improved HCAHPS score results in increased reimbursement rates.
- Hospitals need to become more efficient, competitive, sustainable, and future-proof

North Star

A navigation system:

Patients and visitors will receive a bracelet programed by staff that will give them either verbal or visual navigation to their destination. Upon their arrival they would then return the device to be used by the next person needing directions.

The device will communicate with colored lights that will given visual cues during their journey. If they have difficulties seeing, there will be a voice option to given turn by turn directions.

02 COMPETITOR ANALYSIS

Apps

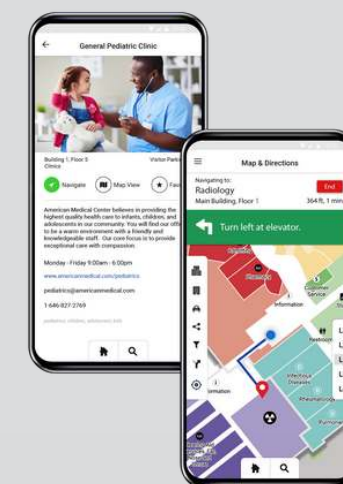

Using Hospital Wayfinding Systems to Improve Patient Experience

Apps

MazeMap gives patients a stress-free way to navigate around the hospital complex. We can integrate with appointment reminder system and give step-by-step navigation.

AI-assisted, human-facilitated

Modern spaces play an active role in shaping people's experiences. Atrius creates spaces that work with people to achieve specific outcomes.

Smart Hospital

HOW MIGHT WE DESIGN A
NAVIGATION TOOL THAT IS
PROVIDED BY THE HOSPITAL AND
USED BY EVERYONE.

x

NORTH STAR

A wayfinding tool for everyone

03

THE WHAT

A NAVIGATION SYSTEM

Patients and visitors will receive a bracelet programed by staff that will give them either verbal or visual navigation to their destination. Upon their arrival they would then return the device to be used by the next person needing directions.

The device will communicate with colored lights that will given visual cues during their journey. If they have difficulties seeing, there will be a voice option to given turn by turn directions.

ABOUT THE WRIST BANDS

- Wrist band will be made from a silicone material that is cleanable with hospital grade wipes.
- They will also be replaceable as needed without replacing the technology piece.
- The existing technology within the hospital can be used as well as an UWB technology which is currently used by real time location systems
- The newly installed lights will be added to the current light system or operate with batteries.

STEPS TO TAKE

Step 1

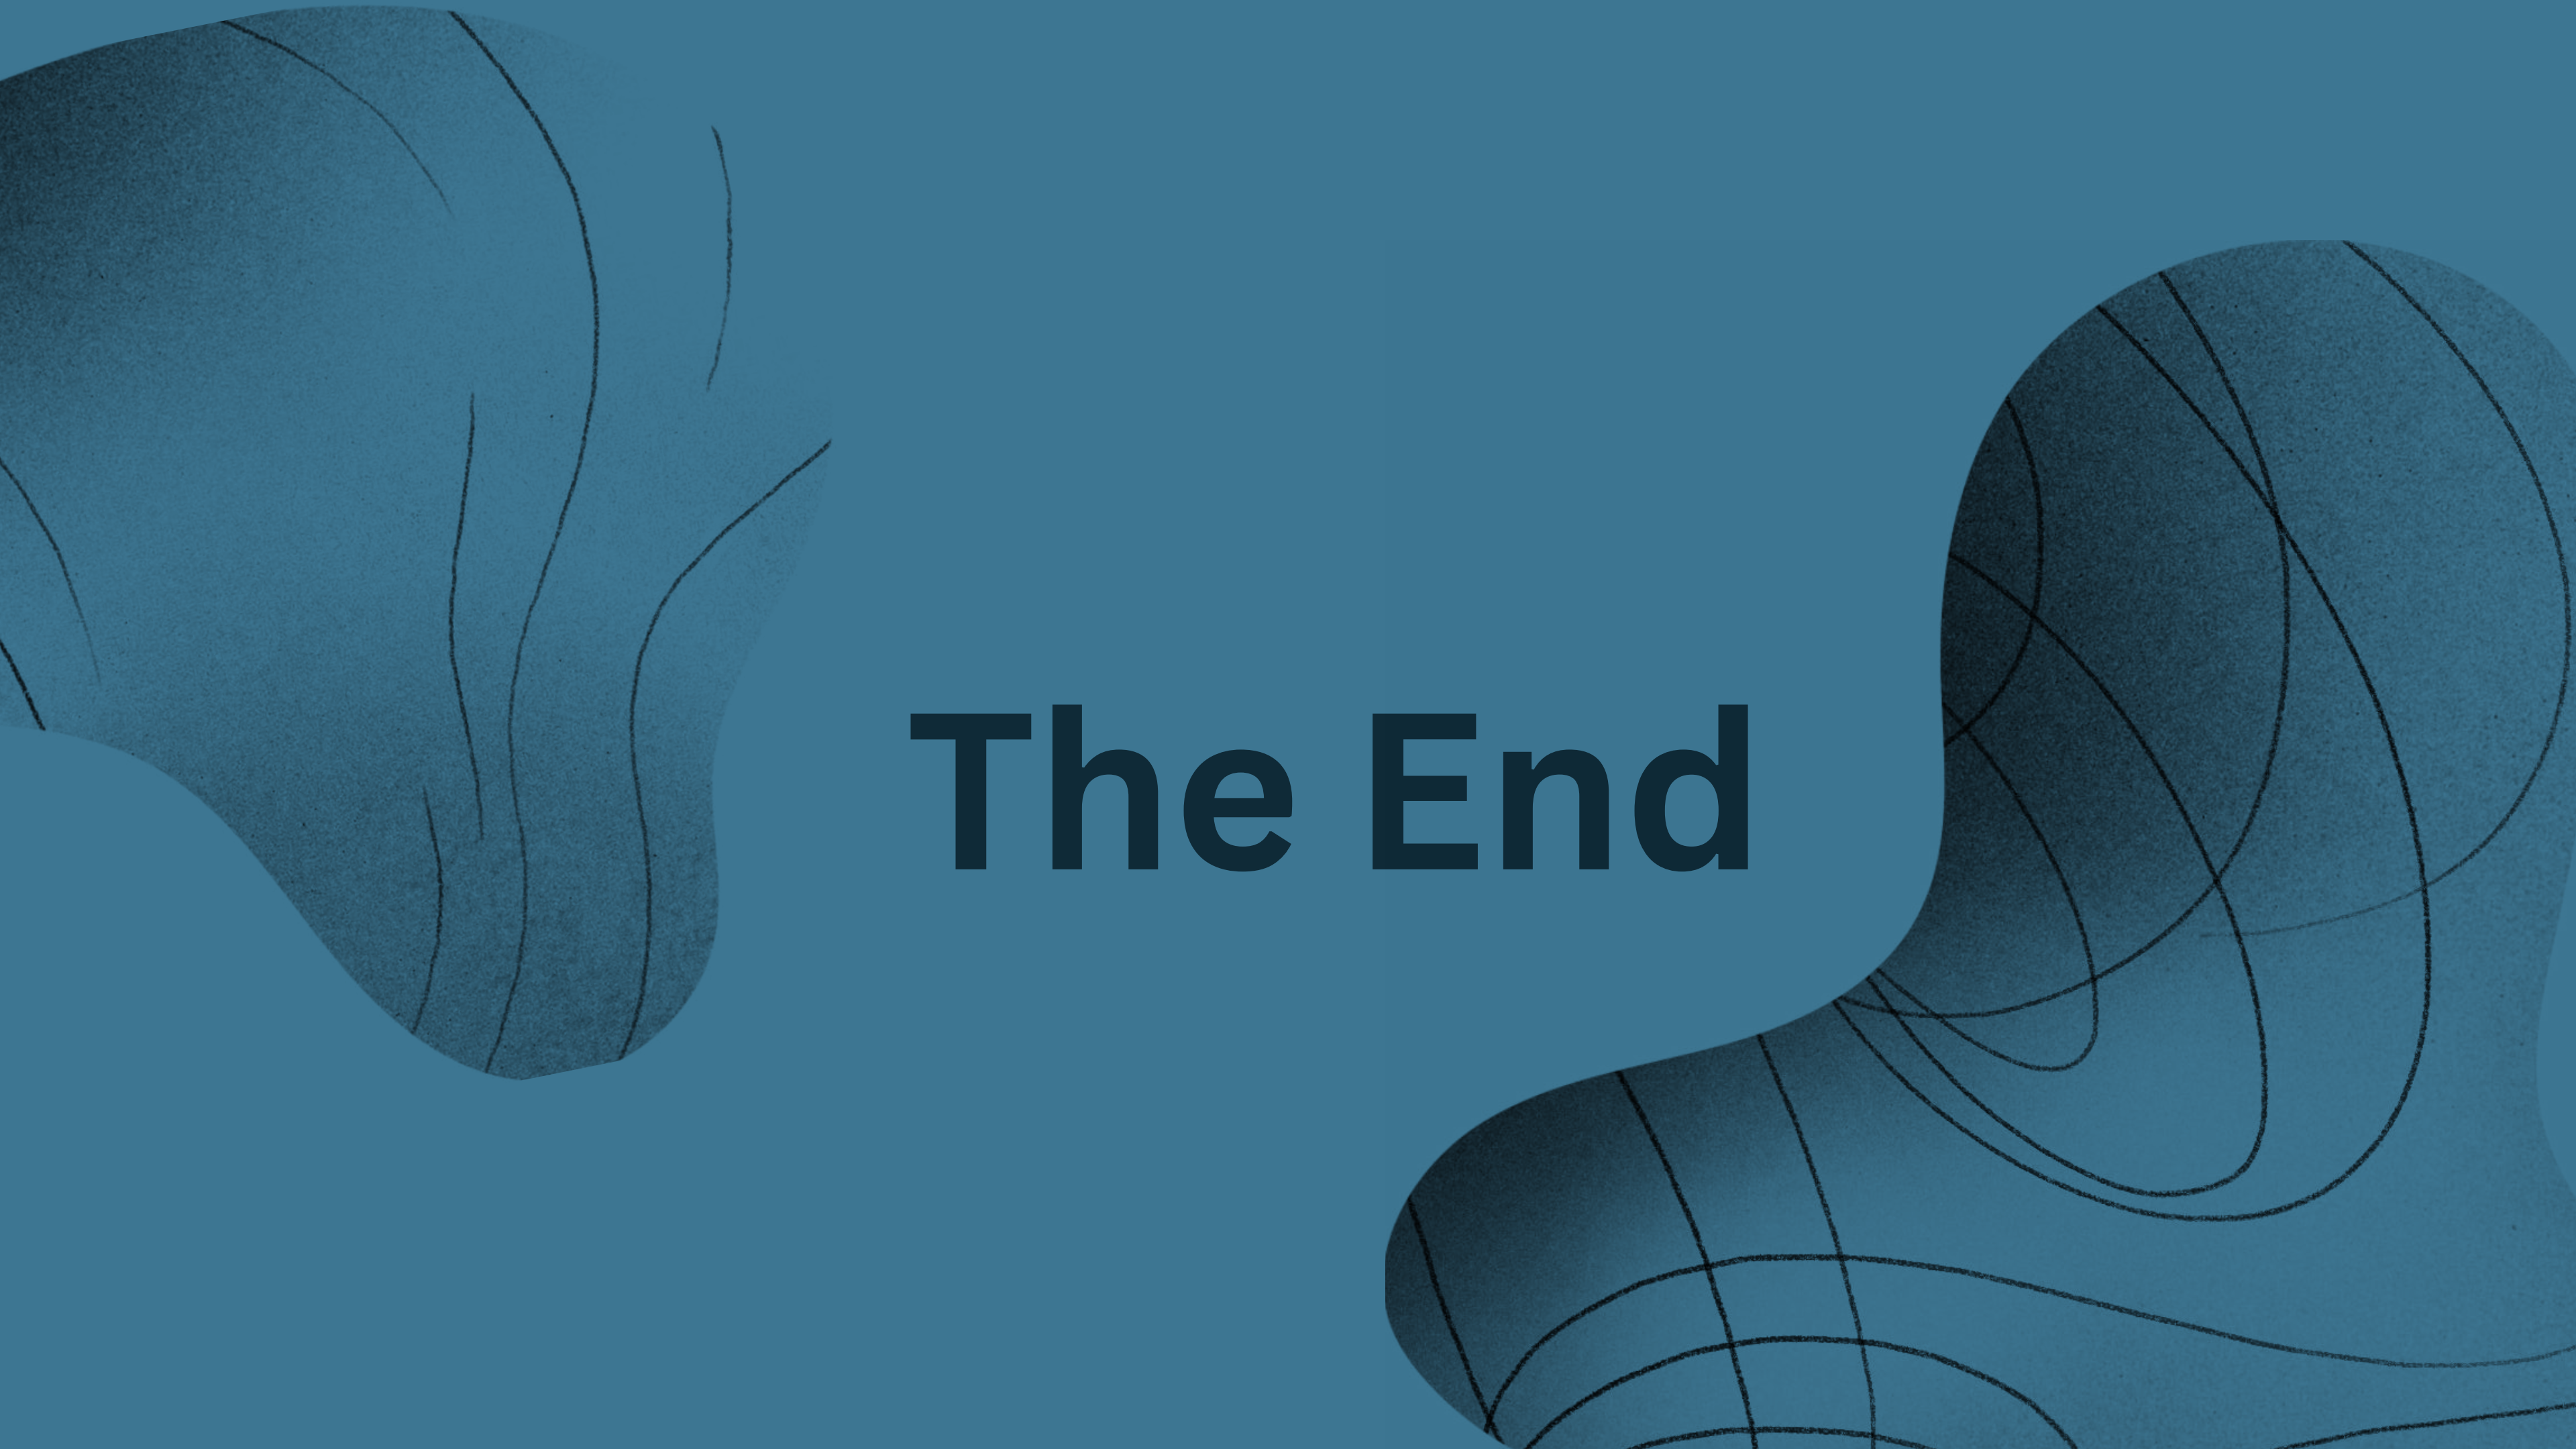

Pilot program that will focus on patients seeking outpatients radiology services.

Step 2

Incorporate visitors and patients entering the inpatient setting. We will expand our pilot to different departments.

Step 3

The ability to monitor and track patients that are able to leave the inpatient unit.

The background is a solid teal color. On the left side, there is a large, dark teal, organic shape with thin, curved lines inside it. On the right side, there is another large, dark teal, organic shape with thin, curved lines inside it. The text "The End" is centered in the middle of the image.

The End

COST STRUCTURE/REVENUE

- Hire technology company to build North Star
 - Rent for Commercial Building
 - Employees
 - Utilities
 - Supplies to create our product
 - Marketing
-
- Sales from hospitals/clinics
 - Subscriptions cost
 - Revenues from companies that will purchase
 - Maintenance Fees
 - Add ons advancement of product

Business model canvas.

KEY PARTNERS Architect firms American Association of People with disabilities Technology firms Texas Aging and Disability Resource Center External Marketing Supply companies	KEY ACTIVITIES Developing Products In person sales Research Selling wayfinding Products	VALUE PROPOSITIONS Due to technology guiding the patient through the hospital the amount of human resources can be reduced The Patient satisfaction will increase due to less friction with the system Patients will find their way easier and faster within the hospital so a smoother process can be ensured	CUSTOMER RELATIONSHIPS -Face to Face interactions Healthcare organizations -Implementation by architect firms -Patients, families, and visitors will interact with product -Online and Off line interaction -Hospital Staff will be trained by staff on how to use devices	CUSTOMER SEGMENTS Patients Visitors Architect firms Families of patients Staff Hospital Institutions Clinics
