The Problem

Families in El Paso
are forced to
choose between
panic-driven ER
visits or sometimes
no care at all.

ERs are overburdened with non-emergency visits.

Current estimates suggest that nearly 40% of all ED visits are medically nonurgent.¹

People in underserved areas often can't tell how serious a symptom is.

Individuals with inadequate or marginal health literacy often struggle with poor self-care²

Low baseline health literacy levels.

Language proficiency and health literacy are strongly positively correlated.³

Lack of accessible, real-time medical guidance leads to delays, stress, and unnecessary costs.

38% of Americans reported postponing medical treatment due to cost concerns.⁴

Emergency Care

30.7% of El Paso residents report speaking English less than “very well”

→ This is significantly higher than state and national averages

Long Waits

Patients in El Paso can expect to wait 30 minutes to several hours before receiving treatment in emergency rooms, depending on the hospital and time of day.

Avoidable Visits

In Texas approximately 811,116 visits were classified as avoidable, with the most common reasons being acute upper respiratory infections (22.5%), urinary tract infections (19.3%), and headaches (10.2%).

Health Literacy

Limited English proficiency is strongly linked to low health literacy, impacting people's ability to understand and use health information effectively.

What's the solution ?

Introducing AidNow

Emergency Health Guidance, Right When You Need It

AidNow is an AI-powered mobile platform that helps users—especially those in underserved communities—understand the severity of their symptoms in real time and guides them to the appropriate level of care, without fear, delay, or confusion.

01 Image Triage

Users can upload a picture of a rash, insect bite, bruise, or swelling. The app uses image-recognition AI to compare the photo against a large medical database and instantly provides an urgency rating

02 Wearable Sync

AidNow connects to smartwatches and fitness trackers to pull vital data like heart rate, oxygen saturation, and temperature.

03 Symptom Checker

An easy-to-use, step-by-step Q&A flow that adjusts based on user input—designed with low health literacy and bilingual users in mind.

Key Features That Put Care in Your Hands

From symptom to solution—in minutes.

With bilingual support, wearable integration, photo-based diagnostics, and culturally responsive design, AidNow doesn't just offer information—it offers peace of mind, reduces unnecessary ER visits, and empowers people to take action with clarity and confidence.

Image Triage

Upload images of rashes or injuries for AI-driven analysis.

Symptom Checker

Easy Q&A flow helps users identify urgency fast.

Wearable Sync

Pull real-time vitals like HR and O₂ to guide decisions.

Resource Matching

Connects users to local clinics, telehealth, or 911.

Bilingual Support

English + Spanish options for all content.

Cultural Design

Built for low health literacy and community trust.

Target Market: Built for Those Who Need It Most For Moms and Abuelas

These communities don't need more complexity—they need guidance they can trust. That's what AidNow delivers.

Spanish-Speaking Young Mothers

- Lead family health decisions
- Balance work, kids, and health
- Use phones and WhatsApp for help
- Worry over symptoms like rashes/fever
- ER often used out of fear or doubt

Elderly Spanish-Speaking Adults

- Managing chronic conditions
- Limited English and tech literacy
- Unsure when symptoms require care
- ER visits often driven by fear
- Depend on family for health decisions

Why Now?

The system is ready for change

Digital Health Is Booming

- Telehealth, AI, and wearables are surging
- Patients are embracing app-based care
- Mobile use is rising, even in underserved areas

ERs Are Overwhelmed

- ERs are understaffed and overwhelmed
- 40% of visits are non-emergent
- Too many patients just need guidance

Misinformation Is Filling the Gap

- Without trusted tools, people turn to YouTube, Reddit, or unreliable sources
- We need medically grounded solutions designed for real-world use

Business Model:

Accessible, Scalable, Sustainable

Freemium Model (Direct to Consumer)

Free tier:

- Symptom checker
- emergency guidance
- clinic locator

Paid tier: (~\$5–10/month)

- Photo-based triage
- Wearable integration
- Personalized follow-up and telehealth sync

Clinic Licensing

AidNow Liscened to:

- Community health centers
- School-based health programs
- Medicaid-serving providers

**\$300–\$1000/month per clinic
based on volume**

Strategic Partnerships

With:

- Insurance plans (especially Medicaid MCOs)
- Public health departments
- Employer health programs

Cost Estimate

Category	What's Included	Estimated Cost
Product Design (UX/UI)	Wireframes, prototyping, bilingual UX, patient-centered design	\$5,000–\$8,000
App Development (Frontend + Backend)	Android/iOS + web dashboard	\$25,000–\$40,000
AI Integration (Basic)	Symptom checker logic, image triage prototype using open-source AI	\$8,000–\$15,000
Wearable Integration (API-based)	Sync with Apple Health, Fitbit, etc.	\$3,000–\$5,000
Database & Infrastructure	AWS/GCP setup, HIPAA-compliant storage	\$3,000–\$6,000
Legal & Compliance	Privacy policy, HIPAA consultation	\$3,000–\$5,000
Testing & Iteration	QA, community pilot feedback loop	\$2,000–\$4,000
Branding + Landing Page	Logo, color palette, pitch website	\$1,000–\$3,000
Contingency Buffer	Unexpected technical pivots	\$3,000–\$5,000

Revenue Potential

Scalable Across Multiple Channels

Revenue	Description	Year 1 Estimates
Direct Subscriptions	Paid users at \$7/mo	5,000 users \$420K
Clinic Licensing	10 clinics at \$500/month	\$60K
Partner Contracts	Medicaid/public health pilots	\$100K
Total Year 1 Revenue		~\$580K

What am I asking?

75k for 10% Equity

Pains

- Limited access to urgent care or primary care
- Fear of misjudging symptoms and putting family at risk
- Low health literacy and limited English proficiency
- ERs used for non-emergent care due to panic or confusion
- Stress from being unsure what's serious vs. manageable

Customer Profile

- Understand health symptoms and decide if they need care
- Protect and make decisions for family health (young moms)
- Manage chronic illnesses (elderly)
- Avoid unnecessary healthcare costs
- Access clear, trustworthy, bilingual medical guidance

Gains

- Fast, accurate answers from home
- Peace of mind without needing to rush to the ER
- Guidance that's culturally relevant and in their language
- Empowerment to make smarter health decisions
- Trusted digital support, especially after hours

Pain Relievers

- Removes the guesswork in urgent health moments
- Bypasses wait times and clinic access issues
- Reduces preventable ER visits and stress-driven decisions
- Designed for low digital/health literacy
- Builds trust through simple, clear, bilingual UI

Gain Creators

- Removes the guesswork in urgent health moments
- Bypasses wait times and clinic access issues
- Reduces preventable ER visits and stress-driven decisions
- Designed for low digital/health literacy
- Builds trust through simple, clear, bilingual UI

Value Proposition

AidNow provides real-time, AI-powered symptom guidance that helps underserved, Spanish-speaking individuals make informed health decisions—before they panic, overspend, or overwhelm the system.
